

ABSTRACT OF THE DISCLOSURE

Disclosed is a stacked type semiconductor device comprising a predetermined semiconductor integrated circuit chip and at least one semiconductor integrated circuit chip which are stacked, the at least one  
5 semiconductor integrated circuit chip including a group of circuit blocks, and the predetermined semiconductor integrated circuit chip comprising a storage section configured to store defect information indicative of  
10 a defective circuit block if the group includes the defective circuit block and a replacement circuit section configured to replace the defective circuit block.
